

Data Recovery and Preservation Services

Free Estimate - No DATA No Charge

Forensic Computers, Inc. has been involved in computer forensics and data recovery for over 10 years. We have expanded our capabilities to include FAILED hard drive recovery using the latest technology available. Physical failure can be any of the following:

- Electrical Component Failure (Failed or burnt chip on the PCB)
- Mechanical Failure (Damaged READ/WRITE heads, spindle motor)
- Physical damage from fire, electrical surge, being dropped, etc.

Symptoms can include:

- The drive making a clicking noise
- Drive suddenly not recognized by the system
- Drive access or writes slow down

There are also non-physical or logical problems that can prevent you from getting your data. These include:

- Accidentally formatting a drive
- Accidentally deleting files
- Computer viruses and other Malware
- Installing a new Operating System without a backup
- Corrupted system areas

If your hard drive starts making unusual noises like clicking or scraping it means the drive may be starting to fail. You should shutdown your system and contact us before further damage occurs.

In addition to recovery, we can also assist you with data preservation. For instance, if you have a bunch of old ZIP Disks, we can move that data to a DVD or a hard drive.

Forensic Computers, Inc. takes your data privacy seriously and we are able to maintain your "Chain of Custody". Your data will never be on a network and access to your data is strictly controlled. Contact us for more information about your data recovery or data preservation requirements.
